

How to Execute a 3 Point Turn

A 3 point turn or sometimes called a K turn is a simple change of direction movement. Only execute this maneuver when it is safe to do so.

Step 1- Signal right and pull over to curb. Then crank your wheel all the way to the left (counter clockwise). Next signal left and roll slowly to the opposite side curb.

Step 2- Next we want to shift to reverse and with quick hands and crank the wheel right (clockwise). Roll back as you look back and continue to back up until you are confident you can complete the turn without hitting the curb.

Step 3- Finally shift to drive and crank the wheel left (counter clockwise) and complete the turn safely into your new lane.
